

Summer Practice 2026

PetPal (Lost & Found Pets)

Goal: A user-friendly app for reporting, browsing, and reuniting lost and found pets in a local area - dogs, cats, birds, and other animals. Users can post photos to help identify and locate missing pets.

General functional requirements:

- Landing page (to be displayed when the user is not signed in)
 - Show the name + functional description of the application
 - Display a few relevant images (can be generated with AI)
 - Log in form:
 - Email address, password
 - Login button
 - Forgot password link (without implementation, later stage)
 - Create account button (without implementation, later stage)
- Header
 - Include the name of the authenticated user
 - Dropdown with Logout functionality
- Navigation menu
- 'Dashboard' page
 - Display cards that are used for accessing functionalities from within the app.
 - Add a carousel with the latest images added (recipes, animals, etc)
- 'About us' page
 - Presentation of team members with pictures, names, and short descriptions.
 - Application version and short technical description (stack suite, architecture, etc)
- 'Contact us' page
 - Later stage: Include a page that enables users to fill in a Google/Microsoft form (embed code, no auth required)
- Roles:
 - Users
 - Later stage: Administrator role - Upon logging in, users identified by their email address are granted elevated access. Administrators can perform all end-user actions, plus: full CRUD on all content, moderation photos, and access to an admin dashboard with charts

□ Core functionalities

Report list

- Display in a list (table/cards), at least 6 tiles/panels with website-specific pet reports:
 - Title (e.g. "Lost: tabby cat near Central Park"), location last seen, date, short description, image.
 - Status (e.g. lost, found, reunited).
- Use pagination to navigate through the reports.
- Sort by default based on the latest added report.
- Use filters (status, animal type, area).
- Search by keyword or location.
- Display on top 'Add report' button
 - add a new record in DB via a form
 - If successful => go back to the list and see new record

Report details page

- Display report details in a structured read-only layout: title, status, animal type, location last seen, date, description, contact details, image.
- Display a gallery in a carousel/dialog of user-submitted photos for that report.
- Upload or take a photo and attach it to the report.

Edit report from details page

- Display the fields in a form.
- Add the 'Edit report' button.
- Cancel button returns from Edit State to details page without saving.
- Edit/Delete button available only for the "own" report.
- Mark report as resolved/reunited (own reports only).

Photo functionality

- Upload an image from the device, or take a photo directly using the device camera (where supported)
- Validate file type and size before uploading (e.g. JPG/PNG, max size limit 5MB).
- Preview the photo before submitting, with the option to remove/replace it.
- Attach multiple photos to a single report.

□ Stretch Features (If time allows)

- Generate a printable “missing pet” poster (PDF) from a report
- Social media sharing buttons
- Map view showing report locations
- Email notification when a new report matches a watchlist area
- Apply basic image editing (crop / rotate) before uploading
- Leave a comment / tip on a report (e.g. "I think I saw this dog on Main St").
